

## Siemens at Post-Expo 2016 in Hong Kong

Siemens Postal, Parcel & Airport Logistics (SPPAL) is to present the latest solutions for postal and parcel service providers at Post-Expo 2016 in Hong Kong. The full range can be seen on Siemens' stand 11040 from May 24th to 26th.

Highlights include the following products:

- **VarioSort Twin:** Innovative high-volume cross-belt sorter for very small and lightweight parcels. The efficient sorting system can be adapted to mixed consignments and offers maximum flexibility. VarioSort Twin has already been used successfully in Europe and Asia.
- **Intelligent Data Entry Workplace (IDEW):** The latest Siemens technology automates postal sorting in distribution units by intelligent address recognition.
- **Label Learning:** New label types can be read straightforwardly using this prize-winning software.
- **Logistics Software:** Comprehensive software solutions for cloud-based digitalization of the entire logistics chain, from planning and monitoring operational processes in a logistics center to control of all transport operations.

Siemens will also demonstrate ultramodern technology in practical applications: on display will be a 3D model of the e-commerce logistics hub in Singapore, which processes up to 100,000 parcels on a daily basis in an area covering 30,000 square meters. Siemens experts are looking forward to meeting both existing and new customers at Post-Expo, and discussing developments and requirements in the postal and parcel sorting sector.
